Subject: Fw: Public Notice - illuminated signage

find attached is a picture of the buildings (Clinic & Home Depot) lights and how much has impact on the properties a long the south side. Even thou, Home Depot tried to build a brick wall to prevent lights impact but as you can see its very velar from our unit; and this raise up a big concern and disagree to any additional lights of any type. I have been living in my unit before any of the commercial constructed and the City Officials are obligated to do their best to the benefit of the residents.
I do not agree and/or accept any light addition; the City need to provide guaranties not add any negative impacts such lights, other wise I have the right to seek action/escalation to prevent such action.

Thanks,

Dear Pamela,
I'm a resident at 15258 Florist Circle - Apple Valley and received a Public Hearing Meeting Notice letter on 1/17/2018 in regard illuminated signage on building from the City. Please note that I'm 100% against any type of illuminated sign facing south to be placed on any of the commercial buildings (north of the storm-water pond). The existing building are in high elevation and the light of the sign will be very obvious clear and will impact/disturb us from our windows; even with taking light impact reduction precautions such as planting trees and/or installing partitions walls will not block the light from the sign 100%.
Again, I'm against any facing south illuminated sign installation on any building.

Thanks,
Mac Sweidan
15258 Florist Circle
